INSIGHT

- The analysis sheds light on the effectiveness of evacuation protocols during emergencies, especially concerning the prioritization of certain groups for survival. Women and Children are prioritized due to their Vulnerability
- · There is no correlation between survival rate and fare amount
- · A specific passenger with profile (Sex: Male, Age: 36, Pclass: 2, Embarked: C) would have a survival rate of 20 percent
- · Children less than 18 years had the highest rate of survival with approximately 54 percent survival rate, followed by adult between age 30 to 80 with survival rate of approximately 41 percent.
